

Possible second grade questions:

1. When water vapor condenses, what does it change into? (Drops of water)
2. Condensation is the opposite of what other part of the water cycle? (Evaporation)
3. When water vapor in the air condenses into water droplets and the droplets come together, what forms? (Clouds)

Possible fifth grade questions:

1. What is condensation? (The changing of water vapor in the air into droplets of liquid water.)
2. Where does condensation take place? (High above the earth where the air is colder or on the surface of the earth when warm air from the ground meets cooler air above.)
3. What causes condensation to occur? (Water vapor in the air cools and water droplets form on particles of dust.)
4. What is fog? (A cloud that forms near the ground.)
